

**Plugsurfing's partner Hrvatski Telekom started to build  
the first electric corridor in South East Europe**

A total of 31 charging locations will be installed between Croatia and Romania

© Hrvatski Telekom

**BERLIN, 08.11.17 - It's a total of 69 fast and 4 ultra-fast charging stations that will be implemented on the roads from Croatia to Romania by 2020. An electric corridor that will be accessible via Plugsurfing thanks to the partnership with Hrvatski Telekom and Puni.**

Hrvatski Telekom and Kaufland Croatia in Zagreb have installed two fast electric vehicle charging stations within the project "Comprehensive fast-charging corridor network in South East Europe". Two electric charging stations mark the start of the project co-financed by the European Union, which will last until the end of 2020 with a total value of 4.3 million euros.

*"There are more and more users of electric vehicles in Croatia, and tourists as well, who want a fast and accessible charging service for their vehicles wherever they go.", says Dino Novosel from Croatian Telecom. "With this project, our largest regional network of publicly available e-chargers Puni.hr is expanding to the international level, with the goal of creating a complete digital platform for connecting various ICT services and solutions, such as smart parking and connected vehicles."*

The largest regional network of e-chargers Puni.hr currently has 105 chargers in 70 Croatian towns and provides 150 charging spots, making more than 50 percent of all publicly available interoperable charging spots in Croatia. Automatic access to stations is possible for more than 50,000 EU electric vehicle users via mobile application PlugSurfing .
